

Attendance Tracker

Keep this in the room

Print this, or use `attendance-tracker.csv` in a spreadsheet. Either works; the paper one gets used more often because it lives in the room.

How to use it

Mark attendance as they arrive, not at the end. Takes ten seconds and you'll forget otherwise.

The column that actually matters is the one after it: **who was absent, and did you send them the skeleton?** A missed week is harmless if they get the catch-up file, and it compounds into a dropout if they don't. Make sending it a habit, the same evening.

The sheet

#	Student	Scratch username	Consent	Photo	W1	W2	W3	W4	W5	W6	W7	W8
1												
2												
3												
4												
5												
6												
7												
8												
9												
10												
11												
12												
13												
14												
15												

Photo: Y = may be published · R = club records only · **N = no photos, check before every session**

Catch-up log

Week	Absent	Skeleton sent?	Date	Back on track?
1				
2				
3				
4				
5				
6				
7				

End of term

Started week 1: __ Demoed at showcase: _ *Completion rate*:___%

Aim for above 75%. If you land below that, the reason is almost always either that people fell behind and weren't caught, or that the sessions clashed with something else in their week. Both are fixable next term.

Ready for the Python track next term:

Notes for next time:
